

Windows Mobile

Features:

- ▶ Inventory count management including periodic physical procedure
- ▶ Automatic shelf tag generation
- ▶ Compatible with XPBM software
- ▶ Wireless or direct communications to XPBM
- ▶ Download and upload item information to XPBM
- ▶ Scanning capabilities facilitate inventory control
- ▶ Easy-to-use interface

Benefits:

- ▶ Reduces inventory levels
- ▶ Increases pricing accuracy
- ▶ Maximizes efficiency, functionality and productivity
- ▶ Enables mobility
- ▶ Decreases time spent replenishing stock
- ▶ Decreases time spent doing physical inventories
- ▶ Unifies look and feel of shelf tags
- ▶

The Windows Mobile Module enhances the capabilities of XSite Price Book Manager. XPBM manages your price book, maintains inventory stock levels, generates automated purchase orders and schedules your employees. The Mobile Module integrates bar code scanning and wireless communication and enables users to capture, compute and communicate data with XPBM anytime, anywhere. XPBM runs on a back office PC with Windows XP and 2000. It connects to:

- ▶ Gilbarco G-Site
- ▶ Gilbarco Passport
- ▶ Bulloch Bt9000
- ▶ Verifone Ruby

A screenshot of a software window titled 'Scan UPC & Show Details'. The window displays a form with the following fields: PLU (2001), Description (CAMEL FILTER, K), Price (9.68), UPC (06010000503), QOH (0), Case Size (10), Ordering (0 By EA), and Received (empty). There are also checkboxes for 'Shelf Tag', 'Shelf', 'Storage', and 'Counter'. Buttons for 'Save' and 'Close' are visible. A note at the bottom reads: 'Note: Pick up an item you want to scan and press scan button.' The Windows taskbar at the bottom shows the application icon and the title 'Scan UPC & Show Details'.

Scanning

Scanning capabilities keep your inventory up to date with the easy-to-use interface of a Windows Mobile handheld computer. Scan items from a bar-coded catalog and check downloaded price lists, enabling more time to sell and less time doing paperwork.

Downloading

The Windows Mobile allows for downloading item information from XPBM software by Department, Subdepartment, and Supplier.

Inventory Control

Update your physical inventory directly from the handheld scanner as new inventory is received. As shipments are unloaded, management can easily record new inventory levels to XPBM. The Mobile can also be used to do physical inventory, or import inventory counts from a third-party inventory service.

Item Information

Information for each item is displayed on the handheld device by PLU, UPC code, product description, part number, price, cost and units on hand.
