

Mobile Computer

Features

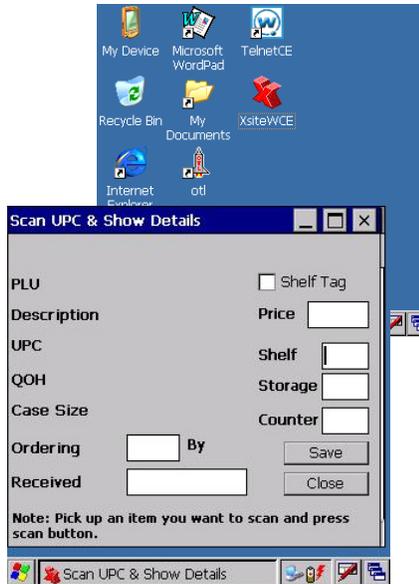

- ▶ Manages inventory count including periodic physical procedure.
- ▶ Generates shelf tags automatically with basic item information.
- ▶ Communicates via wireless or direct with XPBM.
- ▶ Downloads and uploads item information to XPBM with the click of a button.
- ▶ Scans bar codes for inventory control.
- ▶ Automatic ordering and receiving.
- ▶ Easy-to-use interface.

Benefits

- ▶ Increases data accuracy.
- ▶ Increases pricing accuracy.
- ▶ Increases efficiency and productivity.
- ▶ Reduces unwanted inventory levels.
- ▶ Decreases time spent replenishing stock and physical inventories.

Xsite Mobile Computer is a module that enhances the capabilities of XSite Price Book Manager (XPBM). This Mobile Module integrates bar code scanning and wireless communication and enables the users to capture, compute and communicate data with XPBM anytime, anywhere. This module allows users to check pricing information, update inventory, and place automatic orders for items running low in stock.

Scanning

The mobile computer scanning capabilities keeps your inventory up to date with the easy-to-use interface for the handheld computer. The mobile computer will allow you to scan items from a bar-coded catalog and check downloaded price lists and scan items in your store to update prices and inventory. This capability saves employees and managers time doing paperwork and increases employee efficiency.

Downloading

The Mobile allows you to easily download items information to XPBM software by department, subdepartment, and supplier eliminating human errors and saving time.

Inventory Control

Update your physical inventory directly from the handheld scanner as new inventory is received. The mobile computer can easily record new inventory levels in XPBM automatically transferred from the mobile device. This scanner can also be used to do physical inventory, or import inventory counts from a third-party inventory service.

Item Information

The mobile displays basic information for each item including PLU, UPC code, product description, part number, price, cost and units on hand. It also has the capability to show the location of the item within the store.
